Other Competences

Languages

- o Portuguese (Mother language)
- o English (Fluent)
- o Finnish (Basic)
- o Spanish (Very good understanding)

Soft Skills

- o Motivation
- o Attention to detail
- o Eagerness to learn
- o Team work

My experience

Been born in Portugal, it was with naturality that my biggest passion since kid was Football. Following that dream, I started my football career first as player, then studying to become a coach and finally becoming a coach. So, my background studies come from 3 years in university and more than 10 years as a football coach of all ages, both men and women. Since 2014 I was coaching in Finland, where I tried to help football here to develop.

Although, not everything lasts forever, and I started feeling my passion for football to decrease and loosing a bit the joy of football trainings and games. That was when I realized that something should change in my life.

After a lot of self-reflexion, I decided to stop my professional football coach career and pursue a different career path. That was definitely not an easy decision for me, but it's something I don't regret at all.

So that was when I decided to start following an IT oriented career. I have liked football all my life, but the same can be said about computers and internet. That was always a field that made me curious and joyful.

Unfortunately, I had no studies on the area, so I had to start from scratch and go through the basics of how to produce a "Hello World" alert. But that felt really fascinating and just increased all my eagerness to progress my own development.

I decided then to start taking online courses and then subscribed to Codecademy. There I started to learn Javascript language. First beginner, then intermediate. Also studied some small courses of HTML and CSS. Fascination for web-dev was just growing more and more after each course. That's when I decided to take the long Front-end career path course.

That taught quite a lot and most important, made me to put in practice a lot of the things I was learning. My personal portfolio website can be visited at: https://affmde.github.io/my-react-portfolio .

Meanwhile, I've been developing some react apps, applying MERN stack, with the idea of develop and improve not only the front-end background but also the back-end.

As example, a quiz game can be found at: https://the-quiz-affm.herokuapp.com/, a pokemon based game at: https://pokethat.herokuapp.com and my final project from Codecademy course can be found here: https://youscout.herokuapp.com/.

Knowing that not having a degree in Computer Science or related field, reduce lot of my possible knowledge, I'm also aware that hard work and motivation can lead you to find that same knowledge. And basically, that's what I have been doing, in a hope to get a place and enter the IT world.
